

## DVT Project FAQs

### 1. Can I Pre-process the dataset?

Yes, you can clean the dataset, impute the null values, etc.

### 2. Can I change the names of the columns?

That depends on the type of change. The change should be logical. For example:

- If Column name is 'gender\_z', then you can update the column name to 'Gender' or 'Sex'
- If Column name is 'Price', then you cannot simply change it to 'Sales'

### 3. Can I change the values in a particular column?

That depends on the type of change. The change should be logical. For example:

- If Value is 'male\_z', then you can update the name to 'Male'

### 4. Can I make assumptions about the dataset?

Yes, you can assume whatever you deem okay. Your Tableau Story should be able to show that assumption and someone without any technical knowledge should be able to understand the idea behind it. Since, the Data Dictionary is provided, we hope there should not be any issue regarding the dataset.

### 5. Where do I start?

Start with making a plan on 'what is that you want to visualise in a Story as a management person'

- Understand the Data and Data Dictionary
- Make small plots in Tableau Sheets
- Take out insights and write them down somewhere
- Make another plot and do the same as above
- Keep doing it and you will find your way
- Final view must be a Story containing all your desired plots, or Dashboards, and Insights

### 6. How to make a Story?

[https://help.tableau.com/current/pro/desktop/en-us/story\\_example.htm](https://help.tableau.com/current/pro/desktop/en-us/story_example.htm)

### 7. Where do I see a Sample Story?

Go to Tableau Public:

[https://public.tableau.com/profile/alice.mai#!/vizhome/AirbnbNYAnalysis\\_15873199768940/Story](https://public.tableau.com/profile/alice.mai#!/vizhome/AirbnbNYAnalysis_15873199768940/Story)
