

How to hide your upload project on Tableau before sharing it on Olympus?

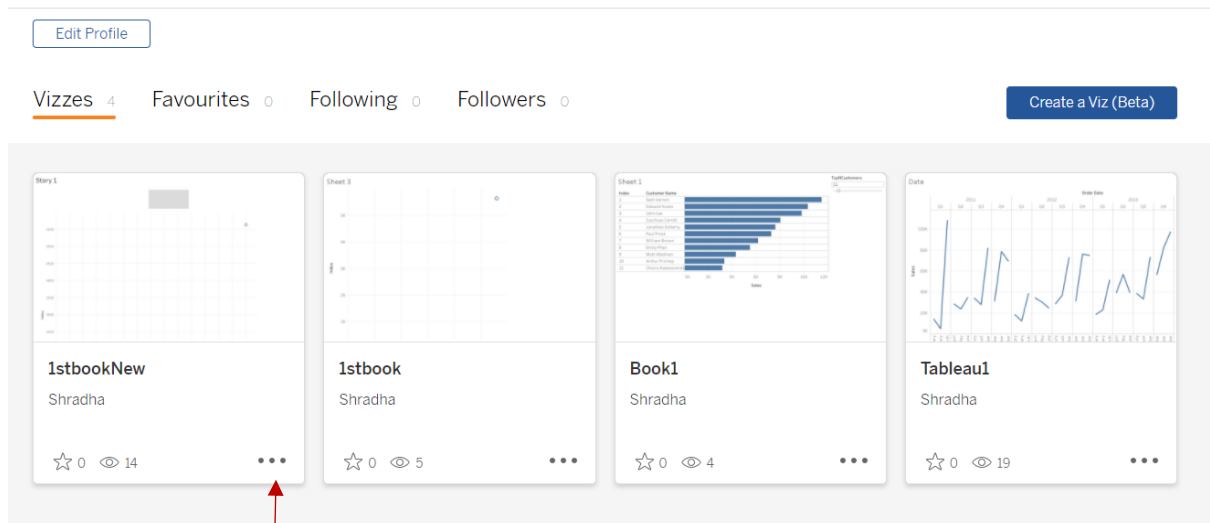

Once you have successfully uploaded your project on Tableau Public the next step is to hide it from everyone so that nobody can see your project unless they have the link of your project.

So, please do follow the steps shared below on **how to hide it** & also **how to share your project on Olympus**:

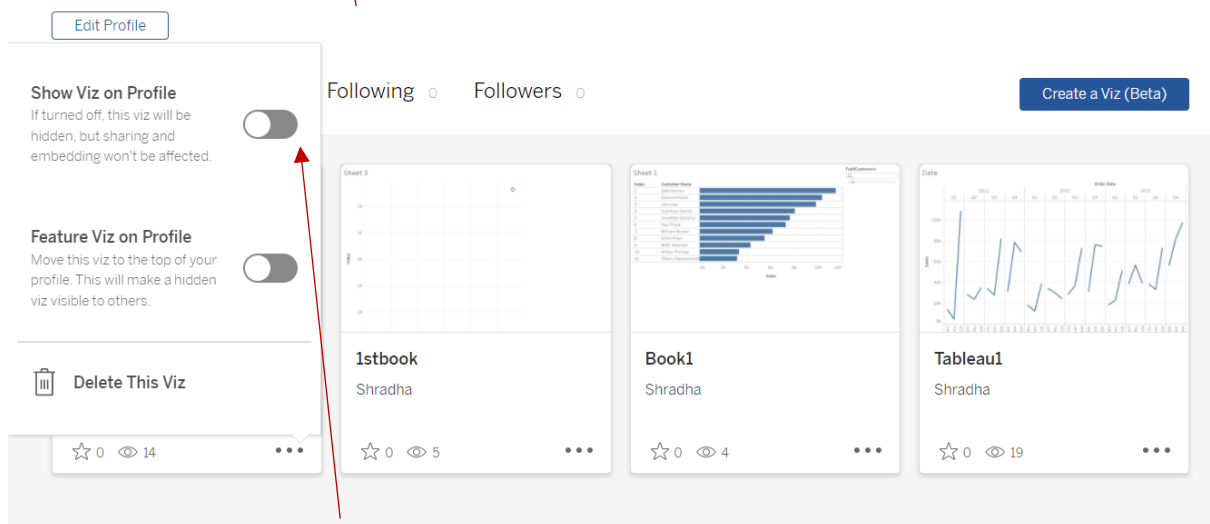

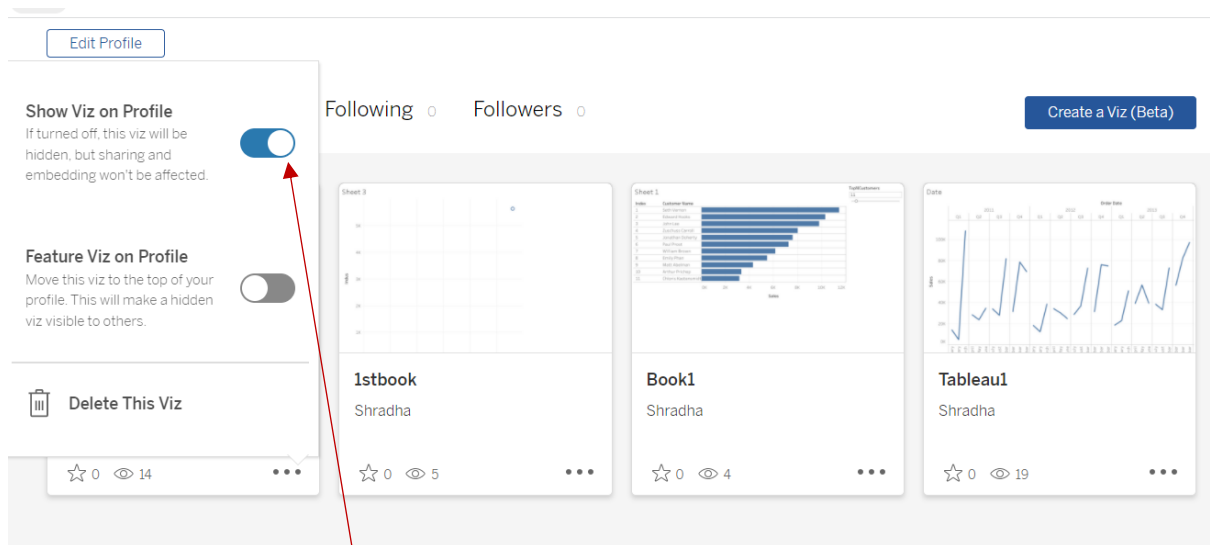

Step 1: Click on the image at right corner of the screen & select My Profile

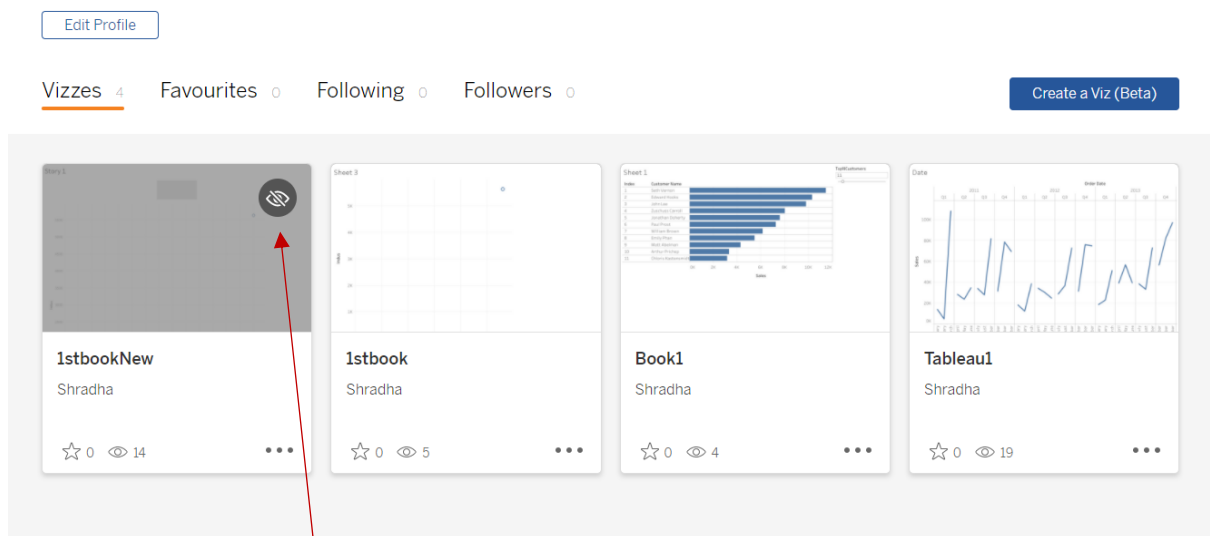

Step 2: Now if you go down in My Profile you can see Viz , here you select your project which you have uploaded. On the below right corner there are three dots click on that.

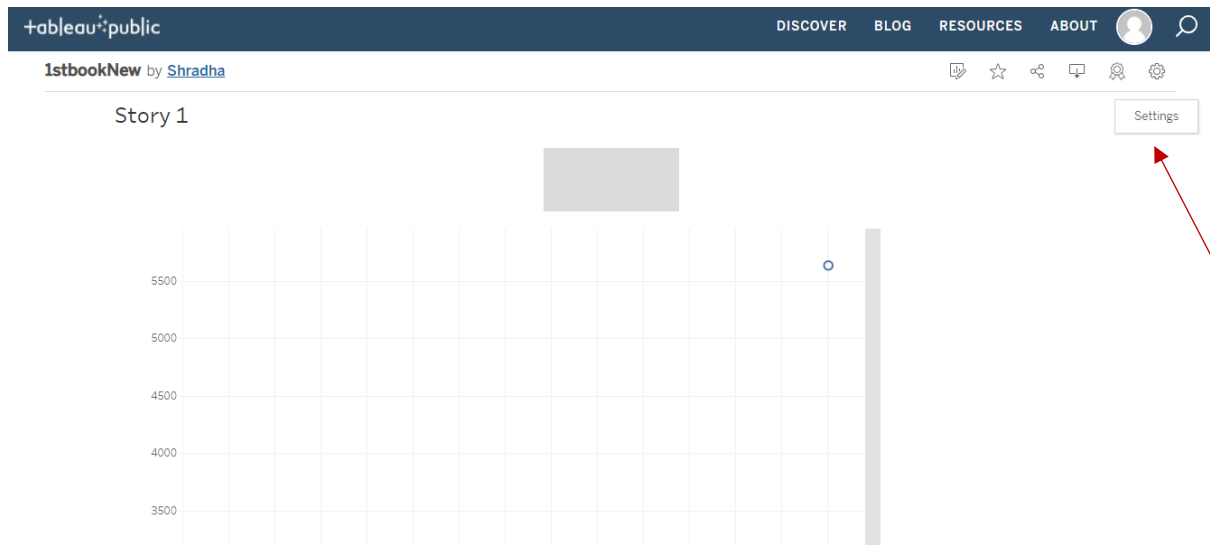

Step 3: Here you will see an option of- Show Viz on Profile which has a button currently in Blue color. Just click on this button again. The blue color will turn to Grey

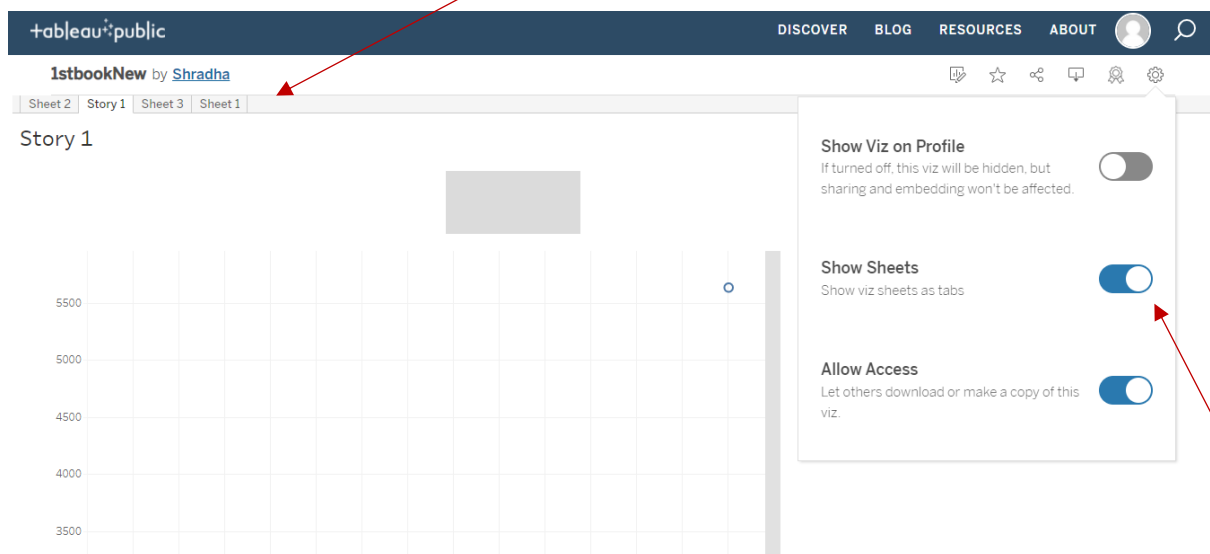

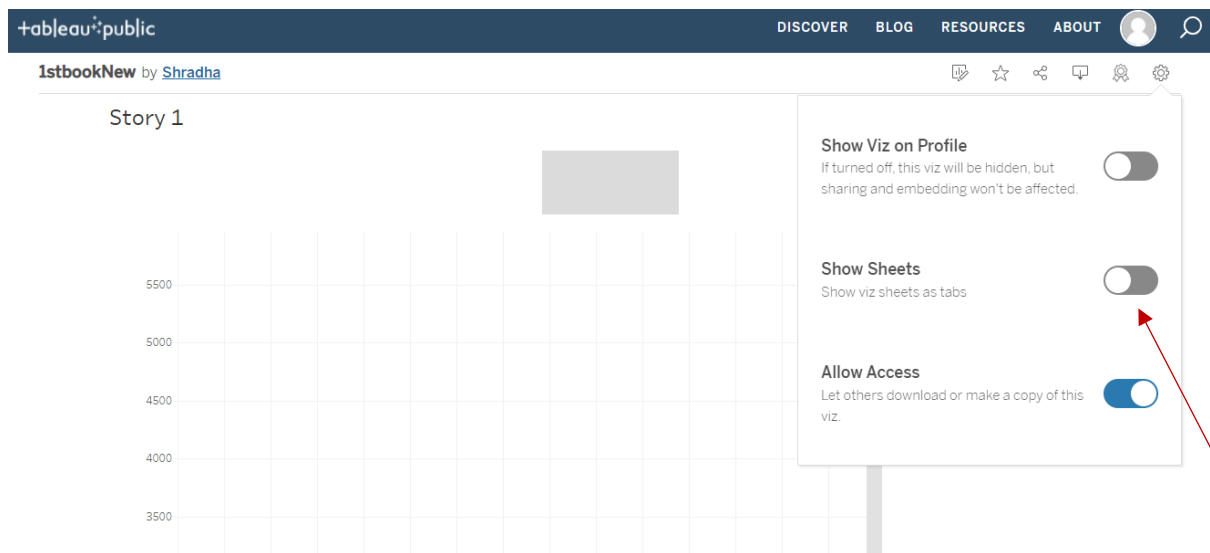

Step 4: Now click on 3 dots again you will see strike off eye icon at right top corner on your project which means now your project is hidden & cannot be viewed publicly.

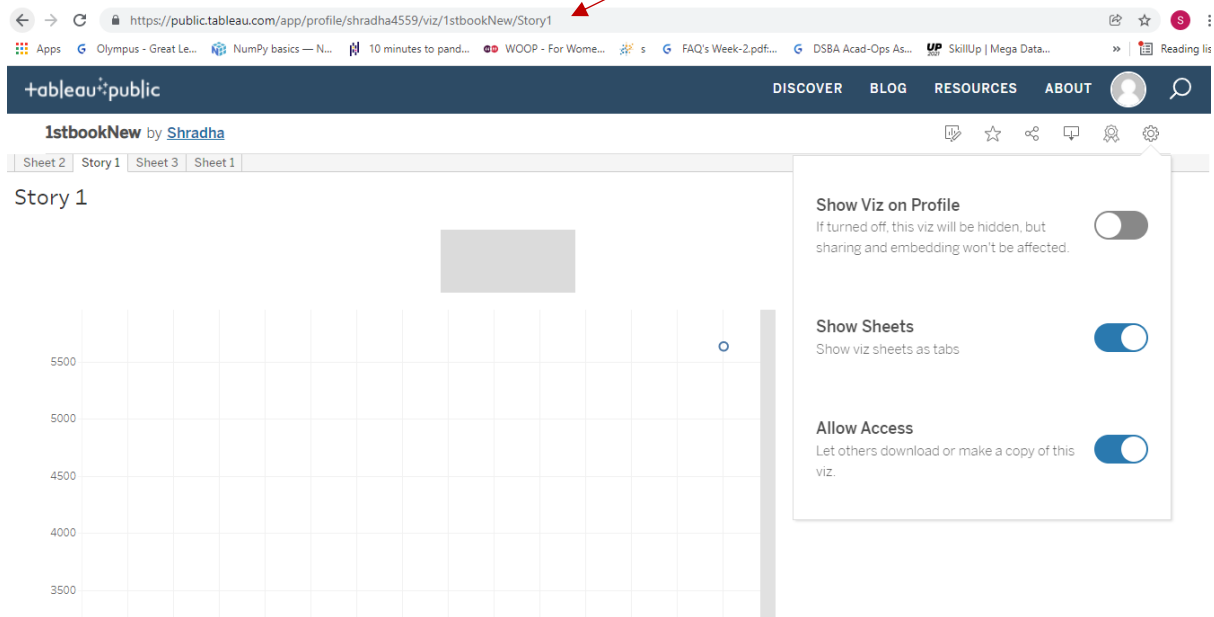

Step 5: Now open your project & click settings

Step 6: Click Sheets this will turn all your sheets to tabs.

Step 7: Copy the link of your project now & paste it in word document & upload the word document in Olympus.

Project Link:

<https://public.tableau.com/app/profile/shradha4559/viz/1stbookNew/Story1>

Step 8:

To double sure that if the above link is working for anyone else, go to Incognito window & open the above link (your project link) if it opens & you can see your complete project here, you are good to go for the submission

Note: Hiding your Tableau Project from public view (Only those who have the link of the project will be able to view it)

Remarks: Please make sure you are sharing the Link of the project.

PLEASE DO NOT UPLOAD YOUR TABLEAU PROJECT HERE (Tableau Packaged Workbook (.twbx))
